U.S. Xpress Enterprises Inc. To Implement Cetaris Fleet Assistant

Cetaris is pleased to announce that U.S. Xpress Enterprises Inc., the fifth largest publicly traded truckload carrier in North America, has entered into an agreement with Cetaris to implement Fleet Assistant, a system with the PocketPC wireless capability. Designed for use by technicians and parts people, the Fleet Assistant system will further the efforts of U.S. Xpress to continue to improve the maintenance efficiency of the Company's fleet of 5,500 trucks and 16,500 trailers.

U.S. Xpress, headquartered in Chattanooga, Tennessee, participated on the Joint Application Design (JAD) team that developed the design for the original Fleet Assistant Windows product. In the fall of 2003, U.S. Xpress engaged Cetaris to perform a requirements phase to clearly define the details of the proposed project to implement the .Net Web version of Fleet Assistant with XML system integration and wireless PocketPC technology for technicians and parts people. The JAD team consisted of fleet maintenance domain experts and software technical personnel from U.S. Xpress and Cetaris. The results included infrastructure requirements, system integration requirements, business requirements, stakeholder criteria for success, key assumptions, risks, and a phased implementation plan.

"The excellent collaboration that has taken place between the U.S. Xpress and Cetaris teams allowed the requirements phase joint project team to meet their goals on time and on budget," said Ric Bedard, President and Founder of Cetaris. "A high level of mutual respect has been developed between U.S. Xpress and Cetaris".

"Implementing the Cetaris Fleet Assistant system provides our Fleet Services team with an additional tool that will further streamline the process of effectively maintaining the equipment in our fleet," said Jerry Elkins, U.S. Xpress Vice President of Maintenance. "Time management is one of the key measurements for our operation. The Fleet Assistant system offers a host of time and communication efficiencies that will benefit our Fleet Services team and our drivers. In addition, we believe that implementing the Fleet Assistant system will provide an additional cost-control tool and, at the same time, enhance our reporting abilities."

About U.S. Xpress Enterprises, Inc.

U.S. Xpress Enterprises, Inc. is the fifth-largest publicly owned truckload carrier in the United States. The Company provides regional, dedicated and expedited truckload services throughout North America, with regional capabilities in the West, Midwest and Southeastern United States. The Company is one of the largest providers of expedited and time-definite services in the truckload sector. U.S. Xpress focuses on customers operating in dedicated, just-in-time or deferred airfreight market segments, while utilizing one of the largest team-operated fleets in the industry. Xpress Global Systems, Inc., a wholly owned subsidiary, is the leading provider of transportation, warehousing and distribution services to the floor coverings industry as well as airport-to-airport transportation services to the airfreight and airfreight forwarding industries through a network of 81 locations in North America. Xpress Global Systems also provides distribution-related services to a number of other industries, including retail, automotive and building materials. The Company also offers logistic services through its joint ownership of Transplace, an Internet-based global transportation logistics company.
